

**Welcome to the Korean Chapter
of the
Hepatitis B Foundation**

Hepatitis B is one of the largest threats for Koreans and other Asian groups. Chronic hepatitis B is a serious liver infection that affects millions of Koreans around the world. It can lead to liver failure and liver cancer. Please share the information in this “Korean Chapter” with your friends, family, and doctor to help stop the dangerous spread of hepatitis B in your community!

Hepatitis B is an infectious disease that is caused by a virus - it is not inherited

- There is a safe vaccine
- There is a simple blood test
- There are treatment options
